

# SAMPLING

## HYGIENE OF SURFACES, PACKAGING AND GLOVES WORKERS' CLOTHES

CHECKING FOR CORRECT REUSE

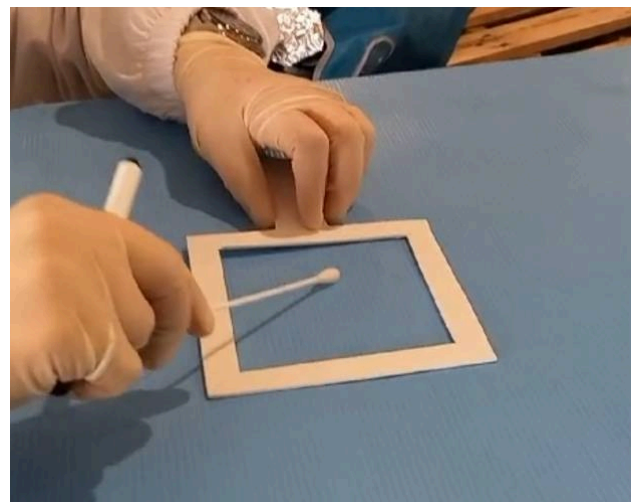

SAFE SUSTAINABLE SOLUTIONS

### ENVIRONMENTAL SAMPLING – SURFACE HYGIENE

Food and packaging industry standards are increasingly demanding attention to MOCA compliance and adherence to hygiene criteria by line operators.

Food Contact Center is able to perform sampling based on ISO 18593:2018 and total microbial count analysis, molds and yeasts, coliforms and other pathogens as necessary depending on the situation.

These analyses are also important when validating the sterilization processes of packaging and surfaces, including a focus on their reuse.
