COLLECT

04

VERIFY

05

MAINTAIN

Turning PPWR into a manageable, traceable and future-ready process.

• BUILDING PPWR COMPLIANCE AND PROCEDURE TOGETHER

PACKAGING AND PACKAGING WASTE REGULATION (EU) 2025/40

The PPWR introduces a new framework for the design, composition, recyclability, reuse, labelling and management of packaging placed on the European market. For companies operating in food, food-contact and packaging, compliance is not simply a matter of reading the Regulation. It means bringing together packaging data, supplier information, technical documentation, laboratory evidence and clear internal responsibilities.

YOU DO NOT HAVE TO NAVIGATE THIS TRANSITION ALONE

FCC/FCS works alongside your team throughout the journey. We help you understand what applies to your business, map your packaging portfolio, engage suppliers, verify evidence, close technical gaps and build a procedure that can be maintained over time.

• A STRUCTURED PATHWAY, BUILT AROUND YOUR ORGANISATION

01

UNDERSTAND

Framework, roles and obligations

02

MAP

Packaging, materials, suppliers and families

03

COLLECT

Declarations, specifications and evidence

04

VERIFY

Documents, testing and recyclability

05

MAINTAIN

Procedure, changes and periodic review

The objective is practical: transform a complex regulatory requirement into a documented, repeatable and continuously maintained compliance system.

FCC/FCS combines regulatory consulting with expertise in Food Contact Materials, chemical compliance, laboratory testing, packaging and recyclability. This allows regulatory requirements, supplier data and technical evidence to be managed within one coordinated workflow.

WHY PPWR REQUIRES A STRUCTURED APPROACH

• FROM SCATTERED INFORMATION TO RELIABLE COMPLIANCE EVIDENCE

PPWR information is often distributed across purchasing, quality, regulatory, R&D, sustainability, production and external suppliers. Collecting documents is only the first step. The information must also be complete, coherent, relevant and supported by appropriate evidence.

WHAT YOUR COMPANY NEEDS TO IDENTIFY

- the company role and obligations within the packaging value chain
- packaging placed on the market and its individual components
- materials, structures, formats, applications and intended uses
- appropriate packaging families and representative items
- information to be requested from each supplier
- requirements concerning substances, materials, recyclability and design
- evidence supporting technical documentation and the Declaration of Conformity
- gaps requiring further documents, testing or technical assessment

HOW FCC/FCS SUPPORTS YOUR TEAM

- analyse applicable PPWR requirements and the company role
- map packaging systems, components, suppliers and relevant characteristics
- define rational packaging families to avoid unnecessary duplication
- prepare structured supplier questionnaires and data-collection modules
- review quality, consistency and adequacy of received information
- identify documentary, technical and procedural gaps
- define corrective actions and testing needs
- create responsibilities, review criteria and update mechanisms

• PACKAGING FAMILIES AND SMART TESTING STRATEGIES

FCC/FCS can support the definition of packaging families using relevant criteria such as material, structure, composition, intended use, food-contact application, format, supplier, manufacturing process and functional characteristics. Where technically and analytically appropriate, we can also assess representative or mixed-sample approaches for sufficiently homogeneous families. Suitability is evaluated case by case, considering the material, the purpose of the analysis and the applicable testing requirements.

OUR APPROACH

Compliance should not become an isolated assessment of individual packaging items. We help you build a data-management, supply-chain and verification process that is understandable for your people, defensible through evidence and adaptable when packaging or regulatory requirements change.

THE FCC/FCS PPWR COMPLIANCE PROGRAMME

A modular service that accompanies you from understanding to implementation.

1

PPWR TRAINING

Practical training on the regulatory framework, obligations of supply-chain actors, sustainability and recyclability requirements, documentation, supplier responsibilities and the relationship between PPWR, Food Contact Materials legislation and other relevant requirements. The goal is to enable your internal teams to understand what information is needed, from whom and how it should be verified.

2

PACKAGING MAPPING AND FAMILY MANAGEMENT

Identification of the packaging portfolio and components, followed by a rational grouping methodology based on relevant technical and functional characteristics. This supports efficient management of documentation and testing.

3

SUPPLIER DATA COLLECTION

Structured supplier information requests and data-collection modules covering, where applicable, composition, weight and dimensions, components, recycled content, substances of concern, PFAS-related information, heavy metals, specifications, declarations, test reports, recyclability and end-of-life information.

4

SUPPLY-CHAIN DATA VERIFICATION AND GAP ANALYSIS

Assessment of the quality, consistency and adequacy of supplier information. Missing, inconsistent or insufficient evidence is identified and translated into clear follow-up actions, documentary requests, technical assessments or laboratory needs.

5

COMPLETE PPWR COMPLIANCE PROCEDURE

Development of a documented internal procedure covering applicability, packaging identification, family classification, data requirements, supplier engagement, evidence review, regulatory gaps, testing, recyclability, substances, technical documentation, Declaration of Conformity support, internal responsibilities, change management and periodic review.

6

PACKAGING DESIGN, REDESIGN AND COMMUNICATION

Support for packaging structure, material selection, optimisation, reduction of unnecessary packaging, alternative materials, design-for-recycling considerations, technical communication and environmental claims supported by appropriate evidence.

A service that can support a complete implementation programme or strengthen selected parts of an existing system.

• CONNECTING REGULATORY REQUIREMENTS, SUPPLIER INFORMATION, TECHNICAL EVIDENCE AND COMPLIANCE ASSESSMENT

One of the distinguishing features of FCC/FCS is the ability to combine consultancy with technical and analytical support. Depending on the packaging and applicable requirements, documentary information can be complemented by targeted assessment and testing.

TECHNICAL & LABORATORY SUPPORT

PFAS testing (Total and Organic Fluorine, PFAS test Target&Untarget LC-MS and GC MS), heavy metals, food contact and migration testing, chemical risk assessment, recyclability and reusability testing, and review of supplier reports and declarations.

DOCUMENTATION & DECLARATION OF CONFORMITY

Organisation and review of specifications, supplier declarations, reports, certificates and other evidence. Support in preparing and reviewing the technical basis required for the Declaration of Conformity.

RECYCLABILITY & PACKAGING DESIGN

Assessment of recyclability and supporting evidence; technical guidance on material selection, packaging optimisation, design-for-recycling and PPWR-oriented redesign.

MONITORING & CHANGE MANAGEMENT

Definition of responsibilities, update triggers and review mechanisms. Maintenance of compliance documentation following regulatory changes, supplier changes or modifications to packaging composition, design or use.

• WHAT THE PROGRAMME CAN DELIVER

- ✓ PPWR applicability and role assessment
- ✓ Packaging register, mapping and family-classification criteria
- ✓ Supplier questionnaires and structured data-collection modules
- ✓ Document review, evidence assessment and compliance gap analysis
- ✓ Testing and technical-verification plan, where required
- ✓ Complete, repeatable PPWR compliance procedure
- ✓ Support for technical documentation and the Declaration of Conformity
- ✓ Defined internal responsibilities, change management and periodic compliance review

YOUR GUIDE AND PARTNER IN PPWR COMPLIANCE

We stay beside your organisation from the first regulatory questions to the practical management of packaging data, evidence and responsibilities. Our aim is to make the pathway clearer for your teams and to help you build a compliance system that is robust, proportionate and sustainable over time.

LET US BUILD YOUR PPWR COMPLIANCE PATHWAY TOGETHER
